POSTDOCTORAL POSITION

The Swedish Museum of Natural History, one of the leading institutions of its kind in Europe, combines unique collections with cutting-edge research in geology, paleontology and biology.

A post-doctoral research position is sought associated with the Swedish Research Council (VR) funded Vegacenter laboratory for micro-analysis. The position responsibilities will be divided between (1) method development at the Vegacenter, i.e., setting up new analytical protocols that will be used by future internal and external users of the Vegacenter as well as in the candidate's own research and (2) research into the link between accessory minerals and rock forming minerals in high grade rocks.

Qualifications

A PhD. in geochemistry or a closely related field is required. The PhD degree should have been received no more than three years before the deadline for applications. The candidate is expected to have experience in micro-analysis using modern analytical equipment. A solid background in metamorphic petrology and tectonics is an advantage.

The position will be funded for one year with a possibility to extend to three years dependent on future funding and will be available from January, 2017. NRM is committed to increasing the proportion of women in research and therefore encourages qualified candidates to apply.

For further information please contact Ellen Kooijman. Union representative is Jörgen Langhof, SACO-S. Both can be reached at +46 8 519 540 00.

Please send your application, marked with **dnr 2.3.1-745-2016**, before December 21, 2016 to rekrytering@nrm.se or to Swedish Museum of Natural History, Box 50007, SE-104 05 Stockholm, Sweden. Attach a list of publications with your application.
